

Have you ever wondered just how many of the instruments and equipment you have been told are “beyond repair” can actually be repaired?

Are you tired of wasting money on replacement instruments you don't actually need to replace?

The SIS Beyond Repair Double-CheckSM (BRDC) program is designed to help facilities like yours reduce unnecessary spending. This **risk-free** service ensures that you are not wasting your limited budget on replacement instruments when your current instruments can be restored to proper function for significantly less.

The BRDC is an industry-leading, **guaranteed budget-improvement** program that helps you protect patients *and* save money. SIS will evaluate the reparability of devices and instruments deemed not repairable by either the manufacturer or another third party service. To date, 78% of all devices brought into SIS under the BRDC program were repairable to OEM specifications.

BRDC program benefits:

- **Does not impact current vendor agreements:** Instruments and devices deemed non-repairable by existing vendors are evaluated.
- **Risk-free:** Evaluations are free of charge, and a repair quote is provided to restore device to OEM specifications. Repairs are only completed if the repair will provide savings to facility and meet original design specifications.
- **Guaranteed savings:** Customer is only invoiced if the repair will restore proper function and save money. If repair costs are comparable to or higher than replacement costs, repairs are not completed.
- **Guaranteed serviceability:** Every repair made by SIS, including those under the BRDC program, are covered by our parts and workmanship one-year warranty. If an instrument cannot be restored to proper function and original design specifications, it will not be repaired. Patient safety is our primary concern, and this program is a critical tool for a hospital's success.

To start saving with the BRDC program, call your local SIS representative or our Corporate Office at 800-747-8044.
